

Remote controlled motorisation is provided by utilising European technology through a custom built direct drive motor system to ensure smooth and quick operation at 26 RPM. The optional high powered LED-TEC lighting system provides a practical touch of class and when coupled with a remote dimming controller allows the user to change the mood to suit the surrounding environment. The heart of the system is driven by the Weave Craft F3 eight wheel slider carriages having a load limit of 600kgs.

## SMOOTH NOVA EVA

Multiple internal stainless steel cables are provided with a pulling strength of over 966kg. It's this tension that is applied to the fabric membrane to allow an angle of 6 degrees fall possible and ensure all water drains away in the internal gutter system.

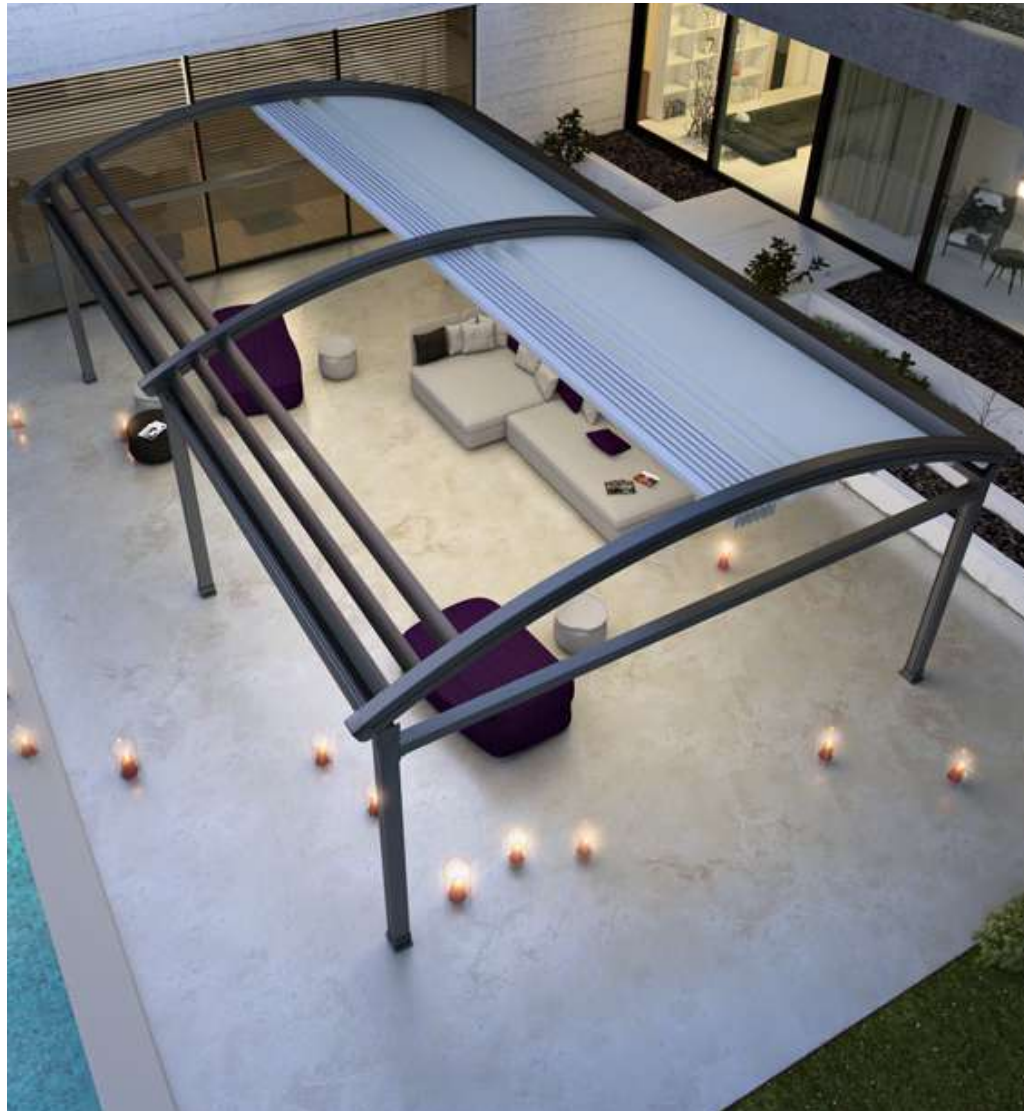

The German manufactured, fire rated and 100% waterproof architectural membrane is available in a range of colours, both opaque and transparent, providing maximum stability and resistance to temperature, moisture and dirt. It does not shrink or stretch, and the acrylic top coating makes it very easy to clean for years to come.

# LUNA

When not in use the fabric is neatly retracted under the systems hood to provide maximum protection.

Hexclusive to Weave Craft systems, Storm guard provides the ultimate protection against rain and draught intrusion around the outside of the system. Storm guards soft touch edge seal is produced from an extra soft & flexible natural rubber to ensure the best possible protection from the elements.
